Professional Summary

Engineering and technology leader with 20 years of experience driving enterprise modernization, cloud transformation, platform resilience, and large-scale delivery across data, mainframe, and distributed systems. Proven track record of leading engineering and program teams of 25+ members, managing direct reports, influencing executive stakeholders, and delivering measurable business outcomes across legacy modernization, Azure adoption, production stability, and AI-driven operational improvement. Combines deep technical expertise in mainframe, SAS, Python, microservices, Azure Cloud, AI/ML, and GenAI with strong execution in governance, stakeholder alignment, delivery management, and organizational capability building.

Core Leadership Areas

- Engineering leadership and organizational development
- Program delivery and transformation management
- Legacy and mainframe modernization
- Enterprise Azure cloud enablement and migration
- Platform resiliency, production stability, and incident reduction
- Microservices architecture and distributed systems modernization
- AI/ML and GenAI-led operational intelligence
- Reliability engineering, observability, and automated remediation
- Governance, RBAC, controls, and performance engineering
- Cross-functional stakeholder management and executive communication

Professional Experience

Senior Engineering Manager | Fidelity Investments

Jun 2025 - Present

- Improved stability and resiliency of mission-critical APIs supporting more than 300 million hits per day.
- Led engineering initiatives to modernize recordkeeping databases on Oracle in Azure Cloud.
- Directed a multi-year migration of customer data from legacy mainframe platforms to distributed Oracle MDM architecture.
- Advanced platform stability and service reliability through modernization, architecture governance, and enterprise-scale execution.

Principal Software Engineer | Fidelity Investments

Jan 2022 - May 2025

- Built and led a 15-member engineering team supporting Azure migration, operational runbooks, and platform enablement.
- Spearheaded a self-service reporting and analytics platform serving 15,000 monthly requests from 3,000+ business users using Power Apps, Node.js, and SAS.
- Led migration of 5,000 SAS programs to SAS EG 7.1, generating annual savings of approximately \$1M.
- Reduced MTTR for disaster recovery activities by 60 percent across 100+ Azure applications.
- Enabled 5-minute root cause analysis for production incidents using AI, Splunk logs, and Datadog tracing.
- Applied machine learning to reduce data pipeline failures by 40 percent and improve MTTR by 20%.
- Managed highly regulated data operations supporting \$4.5T in assets, 65K funds, and 24K clients.
- Strengthened enterprise Azure adoption through strategic partnerships and delivered 4.8 CSAT twice.
- Mentored 25+ engineers and practitioners in Azure Cloud, driving internal mobility and capability growth.
- Contributed to enterprise production incident reduction, platform resilience, and stability improvement using AI-driven operational practices.
- Supported enterprise cloud adoption and modernization programs across legacy and distributed application landscapes.

Project Manager | Fidelity Investments**Jan 2019 - Dec 2021**

- Managed a global engineering team of 11 members across India and the US.
- Oversaw a batch ecosystem of 15,000 ETL jobs while maintaining SLA adherence and improving runtime by 10 percent.
- Delivered self-service data pipeline solutions that saved 160 man-hours per day while serving 160K unique users.
- Enabled streamlined data replication and masking processes across multiple platforms and environments.
- Conducted Azure enablement and training programs for 40 engineers to accelerate cloud adoption.
- Achieved more than 100 percent compliance coverage for 24K clients through automated data masking and refresh controls in non-production environments.
- Led RBAC, controls, and performance-testing aligned initiatives across organizational platforms.

Lead Software Engineer | Fidelity Investments**Jan 2016 - Dec 2018**

- Delivered data solutions supporting 24K clients and 32.2 million participants.
- Built self-service capabilities that saved 16 man-hours per day.
- Reduced turnaround time by 99 percent while delivering 500 reports to 3,000 users across the enterprise.
- Designed end-to-end strategies to migrate 16K mainframe jobs to modernized infrastructure.
- Conducted technical training for 30 team members on Control-M and SAS/SQL.
- Established a strong foundation for mainframe workload modernization and migration programs.

Senior Software Engineer | Fidelity Investments**July 2012- Dec 2015**

- Automated 500 recurring reports using Control-M orchestration and a custom customer-facing UI.
- Delivered advanced SAS-based analytics and reporting solutions for business operations.
- Trained 30 team members on SAS programming and operational best practices.

Software Engineer | Fidelity Investments**Aug 2010 - June 2012**

- Established a 6-member SAS programming team to deliver data-driven solutions.
- Modernized Base SAS implementations into advanced SAS macro-based solutions.
- Delivered data products using SAS stored procedures, ODS, and HTML-based interfaces.

Software Engineer | IBM**Feb 2007 - Aug 2010**

- Architected and delivered data-driven solutions using advanced SAS.
- Led fund go-live processes and supported successful production launches.
- Supported mainframe production batch environments across COBOL and SAS workloads.

Selected Leadership Achievements

- Directed mainframe workload modernization and migration initiatives, helping transition legacy processing to scalable modern platforms.
- Reduced production incidents by 50 percent and improved platform resiliency and stability through AI-led operational practices.
- Enabled Azure Cloud adoption across the enterprise through engineering leadership, training, migration support, and stakeholder alignment.
- Led RBAC, controls, and performance testing initiatives across organizational platforms.
- Improved microservices resiliency using rule-based systems, classical AI, and LLM-informed operational intelligence.

Technical Expertise

- **Cloud & Platforms:** Azure Cloud, ADF, ADLS Gen2, Synapse, Databricks, Oracle, Snowflake
- **Engineering & Architecture:** Microservices architecture, legacy modernization, distributed systems, enterprise integration
- **Programming:** Python, SAS, SQL, Spark, SnowSQL
- **Mainframe:** COBOL, JCL, VSAM, SAS on mainframe
- **AI/ML & GenAI:** Machine learning, operational analytics, AI-assisted RCA, GenAI use cases for incident intelligence and resilience
- **Observability & Automation:** Datadog, Splunk, Control-M, Rundeck, AWX, Ansible
- **Delivery & Governance:** Agile, SDLC, JIRA, ServiceNow, RBAC, compliance, audit support, performance testing
- **Visualization & Analytics:** Power BI, Tableau, Plotly, Matplotlib, Seaborn, Bokeh

Education

- Master of Data Science from Deakin University, Australia in 2024
- PG Program in Artificial Intelligence and Machine Learning from The University of Texas in 2021
- Post Graduate Program in Blockchain Technology from Amity University in 2019
- B.Tech. (Electronics and Communication) from UP Technical University in 2006

Certifications

- AZ-305: Azure Solution Architect
- AZ-104: Microsoft Azure Administrator
- AI-102: Designing and implementing a Microsoft Azure AI Solution
- DP-203: Azure Data Engineer
- Databricks Lakehouse Fundamentals
- SAS Base and Advanced Programming
- DB2-700: DB2 UDB v8.1 Family Fundamentals
- FLMI and ASRI Designation, LOMA USA

Additional Details

- Languages Known: Hindi and English
- Interests: Personal Finance, Value Investing, Meeting new people
